Khet Mapper — Satellite Observation Summary

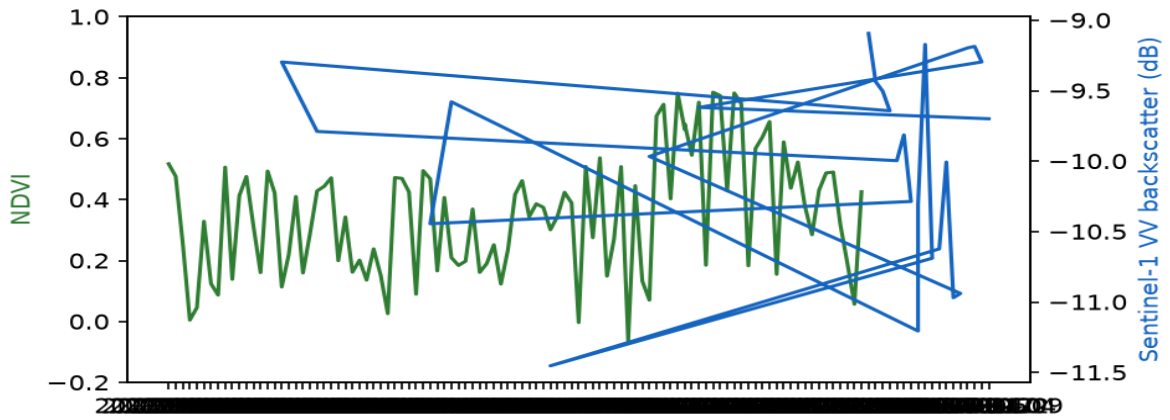

Client / reference: Satkhira Smoke Test
AOI: data/aois/satkhira_smoketest.geojson
Date range: 2023-01-01 to 2023-12-31
Sensors: Copernicus Sentinel-2 L2A (COPERNICUS/S2_SR_HARMONIZED), Sentinel-1 GRD IW VV+VH

Parcel metrics (satellite-derived estimate)

Delineated area: 310.41 ha (2319.93 bigha)
Delineated perimeter: 6258 m
Water surface area (MNDWI/AWEI occurrence threshold): 40.01 ha

Independent research output from an unfunded demo project. Not a validated collateral-verification or insurance product; figures below are satellite-obse

Vegetation & inundation trajectory

Exploratory flood-exposure flags (parcel-level, not GDIC's index)

Observed inundation days (on available revisits, >= 14 consecutive satellite-observed days flagged): 61

tier1: flagged (threshold is a configurable research parameter)
tier2: flagged (threshold is a configurable research parameter)

GDIC's published WIBCI parametric trigger applies to upazila-wide inundation, not individual parcels; this flag is a research exploration of the same logic
